## Legevo - GPS Vehicle Tracking System

GPS vehicle tracking system and solutions allow you to manage your business assets and resources effectively, providing access to vital information that helps improve your services and reduce costs. Our GPS tracking system are easy to use, and delivered fully tested and activated so that you can start tracking your vehicles right away.

## A Fleet Tracking Solution You Can Trust

We understand that your business is unique. From service and delivery vehicles to barges and boats, we'll help you find the right vehicle tracking solution to manage and control your business.

### Service & Delivery Vehicles

Tracking and reporting capabilities allow business owners to improve operations through reduced employee idle time and faster pickups and deliveries.

### Bus & Truck Tracking

Advanced reporting services help track an entire fleet of buses and trucks easily and efficiently. Improving customer service has never been so simple.

### Rental Vehicles

Management solutions for sales vehicles include improved schedule management, lost driver assistance and accurate arrival/departure time predictions.

### Heavy Equipment & Trailers

Knowing where your equipment is at all times not only increases job efficiency, but also reduces costs due to wasted time and unnecessary rental costs. Customized GPS tracking is the first step toward better business operations.

### Marine: Barges & River Boats

Real-time tracking solutions provide updates on the "where" and "when" of River vessels. Loading/Unloading or scheduling movement of a barge becomes more efficient with GPS fleet tracking.

items	spe
GPS Module	Ublox
GSM Module	SIM800C
GSM Band	850MHz 900MHz 1800MHz 1900MHz
Dim.	87.6 * 50.8 * 19.6 mm
Weight	111g
GPS sensitivity	-159dBm
Power supply	DC 9V- 28V
Backup battery	300mAh/3.7V
Memory	1M
Interface	(white wire) oil control relay (black wire) power negative ( red wire) power positive (green wire) ACC detection

1.High quality ABS housing

2.internal GPS and GSM antenna, easy to operated the unit

3.wide working voltage,9V-28V

4.use the highest 8 laminates in industry with high strength, high temperature to protect the host are not affected by abnormal voltage, casuing burned host

5.with flash cache memory, support blind zone to fill reporting the data

6.do not change original car lines, only three lines can be installed(12V or 24V power positive, negtive, ACC detection)
