

## Engineering Machinery Field Site Diesel Refuel and Purification

**Customer:** A mining co., ltd. in northwest

**Vehicle Model:** Forklift, Excavator, Bulldozer, Heavy Duty Truck

**Problem:** Engineering machinery is always working in the wild environment, the quality of diesel fuel cannot be guaranteed, and will be harmful to the machinery. The frequent replacement of nozzles lead to high cost, and will affects the normal operation of machinery.

### Solution: JY-219A Portable Diesel Fuel

**Purification Filter** can purify diesel fuel for engineering machinery on field working site. Its excellent portability with lightweight, can remove impurity particles, colloid and water contained in diesel.

**Effect:** Clean diesel makes the failure rate of engine decrease significantly, at the same time, efficiency will be improved, maintenance costs will be cut down, fuel consumption reduces 5~10%, oil-saving effect is obvious, the service life of diesel engine extends 2~3 times.

### Environmental Protection Trend:

Engineering machinery diesel engine State 3rd Standard will be carried out since Jan.,2016, the application of clean diesel is imperative.
