

## Application of Jingyuan Membrane Filters in Generator Units

The application of membrane technology for oil filtration is revolutionary. As there are many unique features which normal filter elements can not do, the membrane filter elements is incomparable.

### Jingyuan Superiority of Membrane Material

- Selectivity Pass
- Rigid Structure
- High Membrane Flux
- High Specific Surface Area
- High Interception Rate
- Low Differential Pressure
- Widely Chemical Compatibility
- High Precision
- Reusable Filter Elements
- Long Service Life
- Smooth Surface and Super Fouling Resistance
- Excellent Price-Performance

### Recommended for Generator Unit:

#### JY-T32 Diesel Purification Refined Filter

#### JY-DM50 Diesel Purification Refueling Machine

#### JY-DF15A Diesel Purification Filter

### The Functions of Membrane Filters:

Specially designed for diesel purification. According to characteristics of light diesel oil, we adopt Jingyuan high-performance membrane filtration technology to remove impurity particles, colloid and water contained in diesel. Promote the cleanliness level of diesel, and improve the usability of diesel.
