

## Concrete Company Diesel Station Purification Application Case

**Customer:** A concrete company in Liaoning

**Vehicle Model:** Benz concrete tank truck

**Quantity:** 60 Sets

**Problem:** In order to reduce the cost, this company purchase some non-standard diesel from small oil refinery. As the mechanical impurities and moisture in diesel exceeded seriously, the fuel injectors of tank truck were burned frequently. The maintenance cost is too high, and will affect the normal operation of the truck.

**Solution :** JY-DF15 Diesel Purification Filter to remove impurities, colloid and water contained in diesel.

DF15 Diesel Purification Filter is being used at present, the filter elements were cleaned every 2 months, and the using effect is perfect.

**Effect:** Clean diesel makes the failure rate of engine decrease significantly, at the same time, efficiency will be improved, maintenance costs will be cut down, fuel consumption reduces 5~10%, oil-saving effect is obvious, the service life of diesel engine extends 2~3 times.

### Environmental Protection Trend:

Engineering machinery diesel engine State 3rd Standard will be carried out since Jan.,2016, the application of clean diesel is imperative.
